

2.2a EV80 Universal Intermediate Wire Guides

Up to an additional 5 drawn slots / guides can be produced in the system.

Measurements for intermediate wires MUST be made from right to left when viewed from the outside looking inward.

In the above example the specification would be detailed as follows;

Finished Width Overall Unit = 1000 mm

Measure To Position Of 1st Intermediate Wire = 150 mm

Measure To Position Of 2nd Intermediate Wire = 300 mm

N.B: Type 1 - 10mm is the minimum allowance or tolerance from blade edge to overall measured size. Example can be assumed as;

Finished Width Overall Unit = 1000 mm

Finished Blade Width Type 1 = 990 mm

Type 1 - Distance to center of standard 1st and last (outside) hole punch = 16 mm
